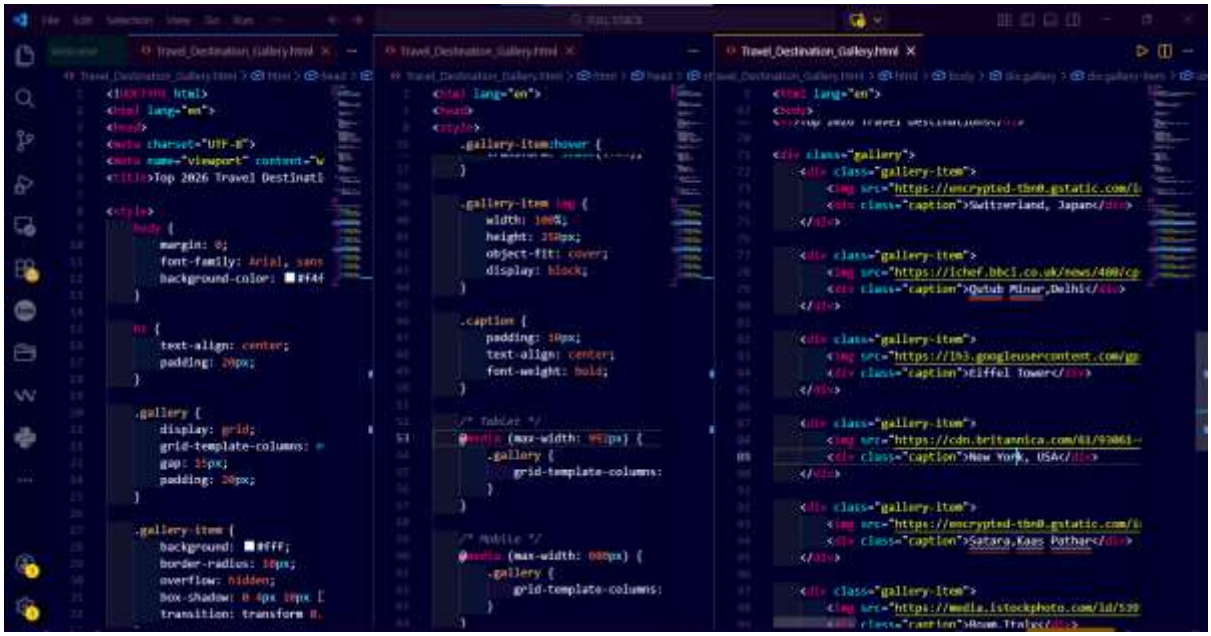
HTML-CSS-III

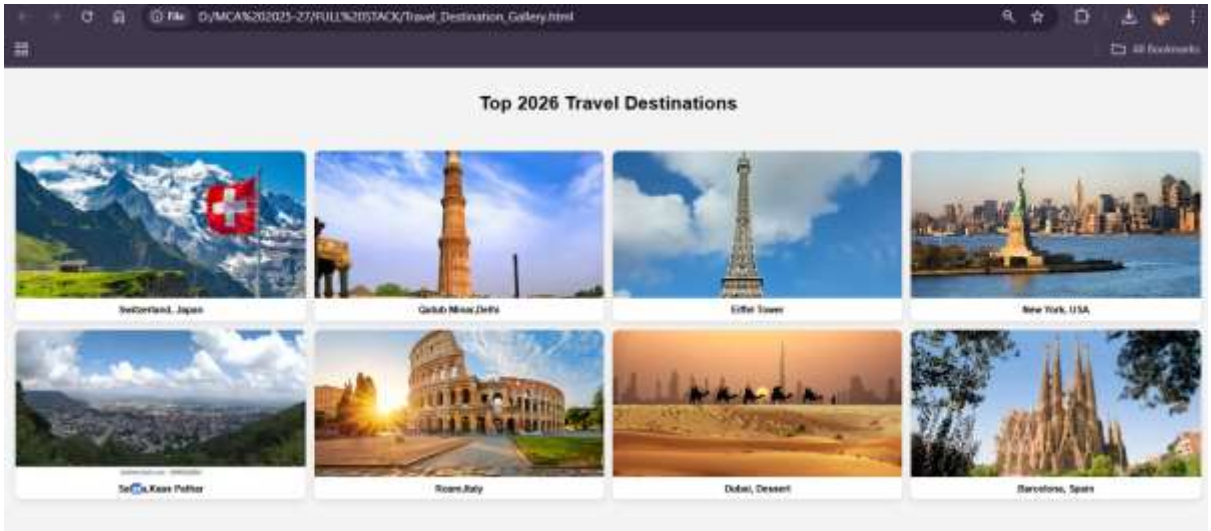
1. **Travel Destination Gallery: Create a responsive image gallery for top 2026 travel destinations where images are displayed in 4 columns on desktop, 2 columns on tablets, and 1 column on mobile.**

   Code:

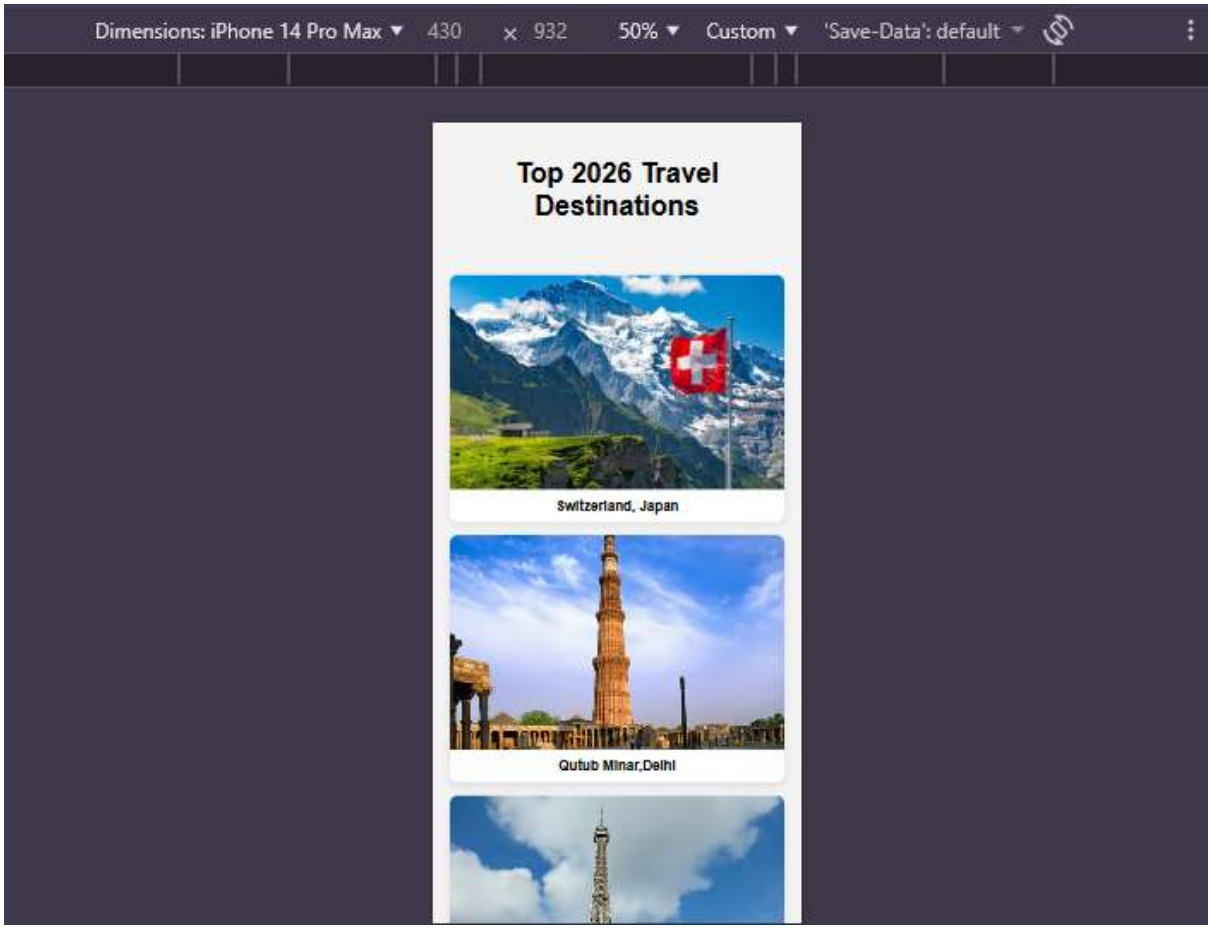


Output:

Laptop View:

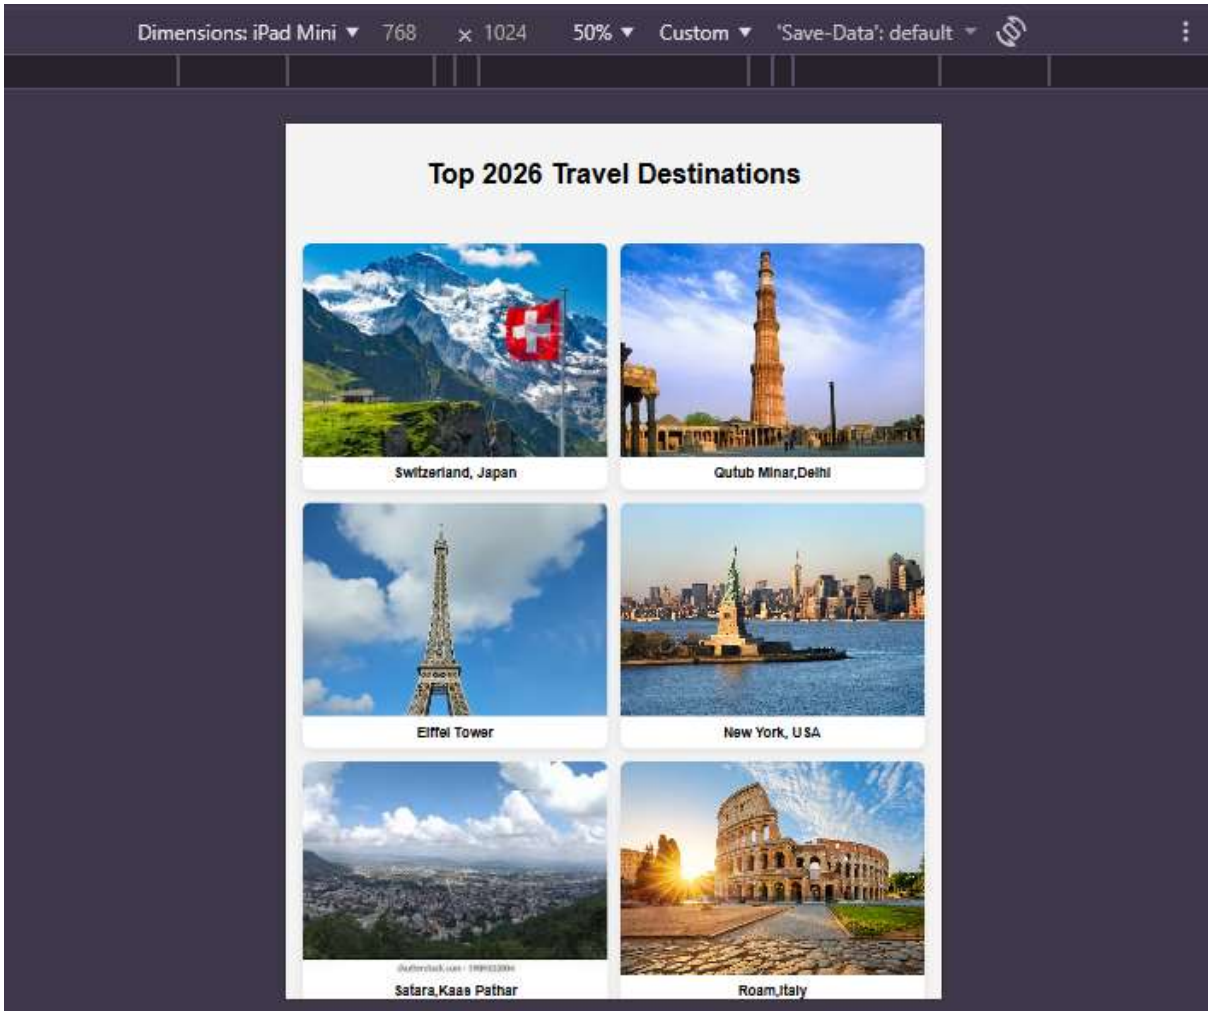


Mobile View:



Dimensions: iPhone 14 Pro Max 430 × 932 50% Custom 'Save-Data': default
Top 2026 Travel Destinations
Switzerland, Japan
Qutub Minar,Delhi

Tablet view:

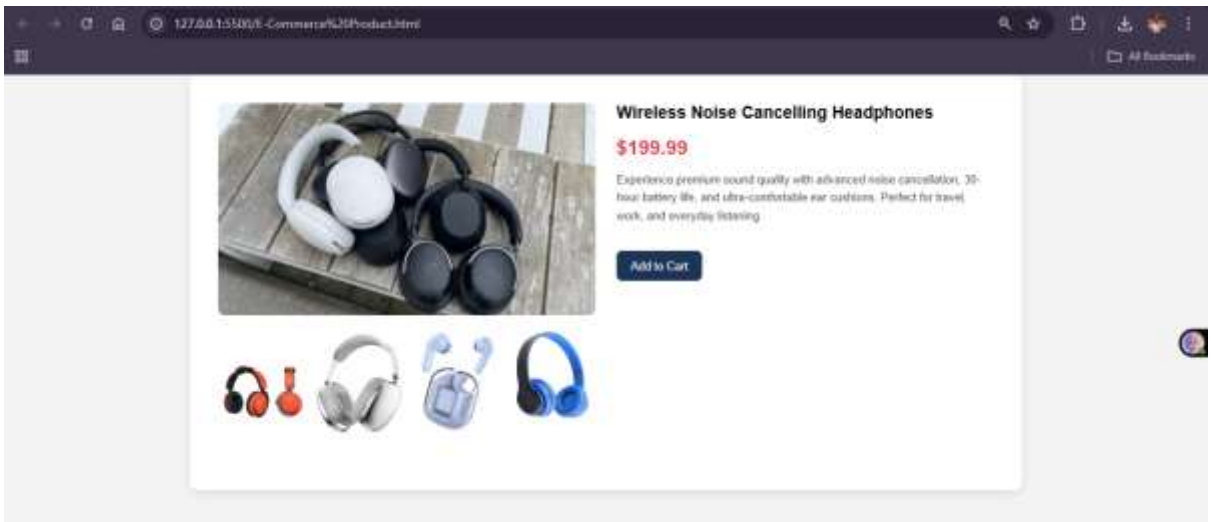


Dimensions: iPad Mini 768 × 1024 50% Custom 'Save-Data': default
Top 2026 Travel Destinations
Switzerland, Japan
Qutub Minar,Delhi
Eiffel Tower
New York, USA
Satara,Kaas Pathar
Roam,Italy

2. E-commerce Product Page: Build a product showcase featuring an image gallery and price details that uses CSS Grid to stack content vertically on mobile but side-by-side on wide screens.

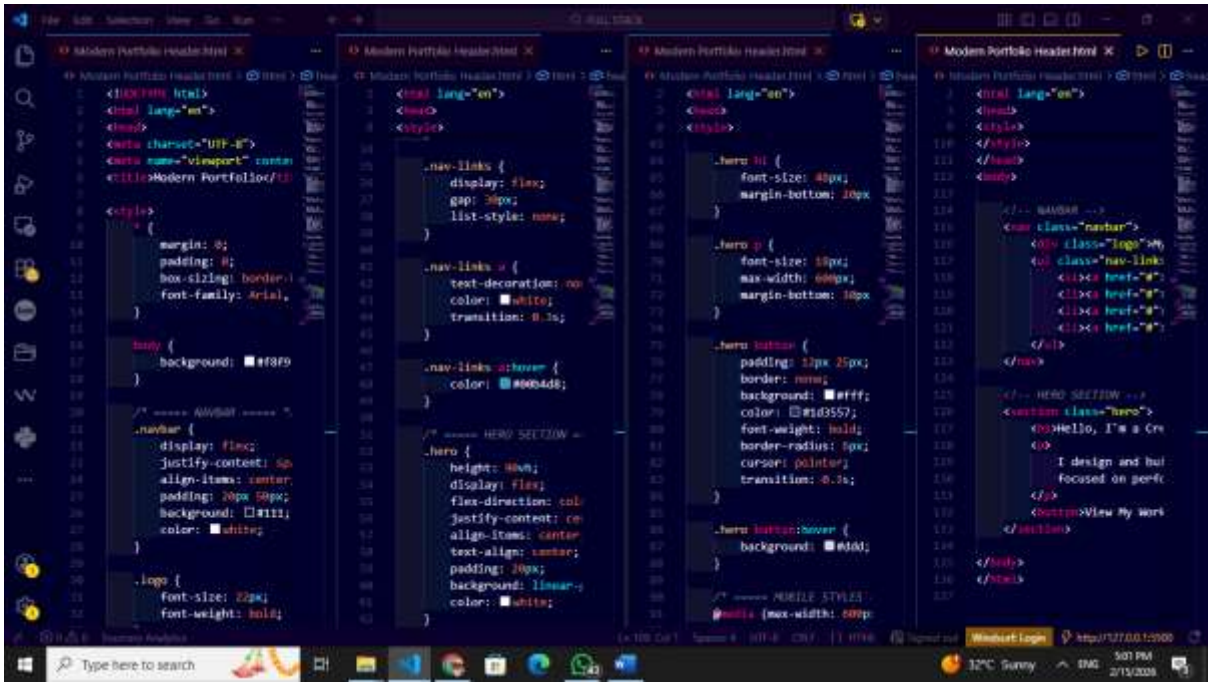
Code:

Output:



3. Modern Portfolio Header: Design a responsive navigation bar and hero section that uses media queries to hide secondary links and center the brand logo on screens smaller than 600px.

Code:

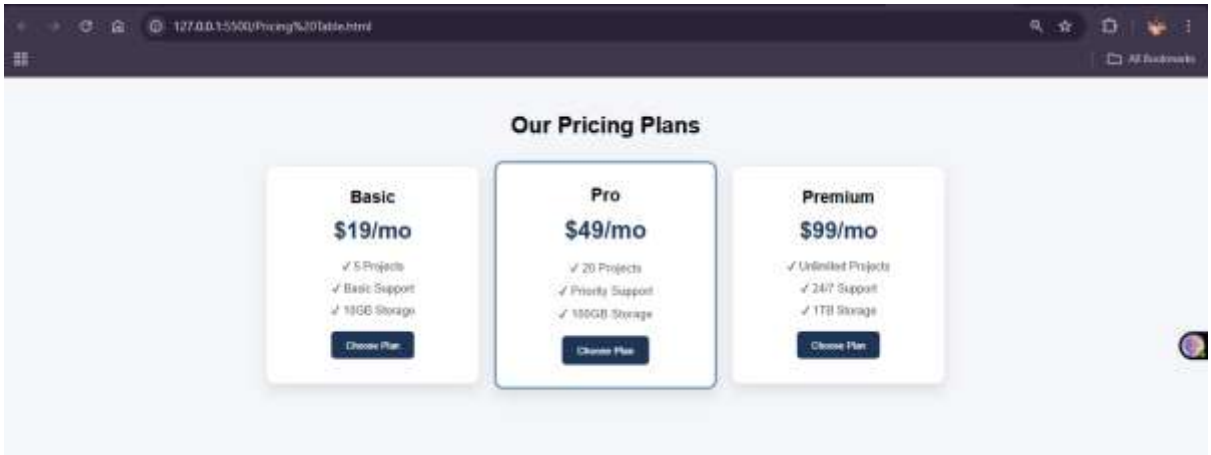


Output:

4. Service Pricing Table: Construct a three-tier pricing layout (Basic, Pro, Premium) using Flexbox that shifts from a horizontal row to a vertical stack on mobile devices.

Code:

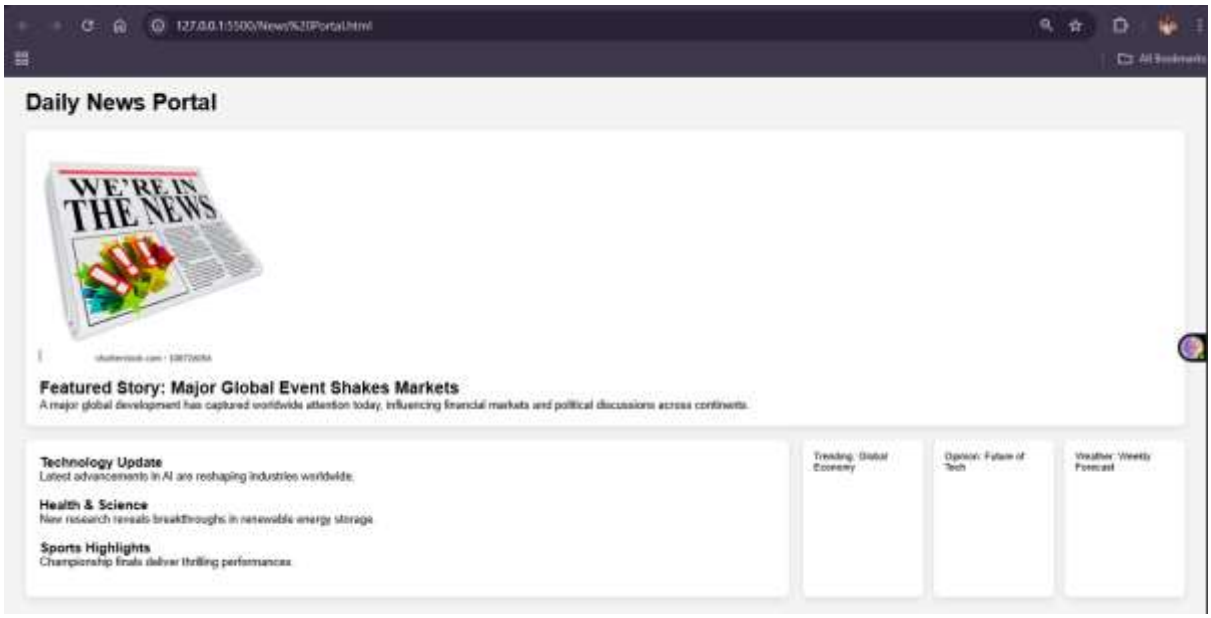
Output:



5. News Portal Layout: Create a responsive news grid with one large "Featured Story" at the top and a three-column sidebar that moves below the main content on tablets.

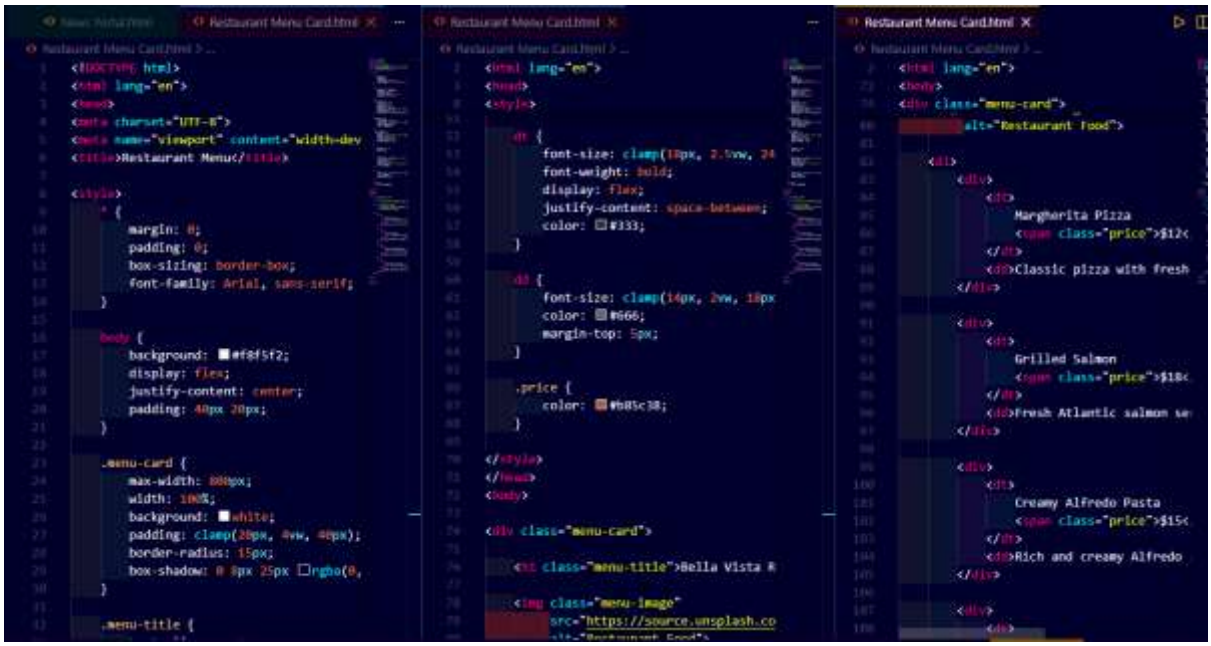
Code:

Output:



6. Restaurant Menu Card: Design a digital menu using description lists (<dl>) that adjusts font sizes and image dimensions dynamically using the clamp() function for different viewports.

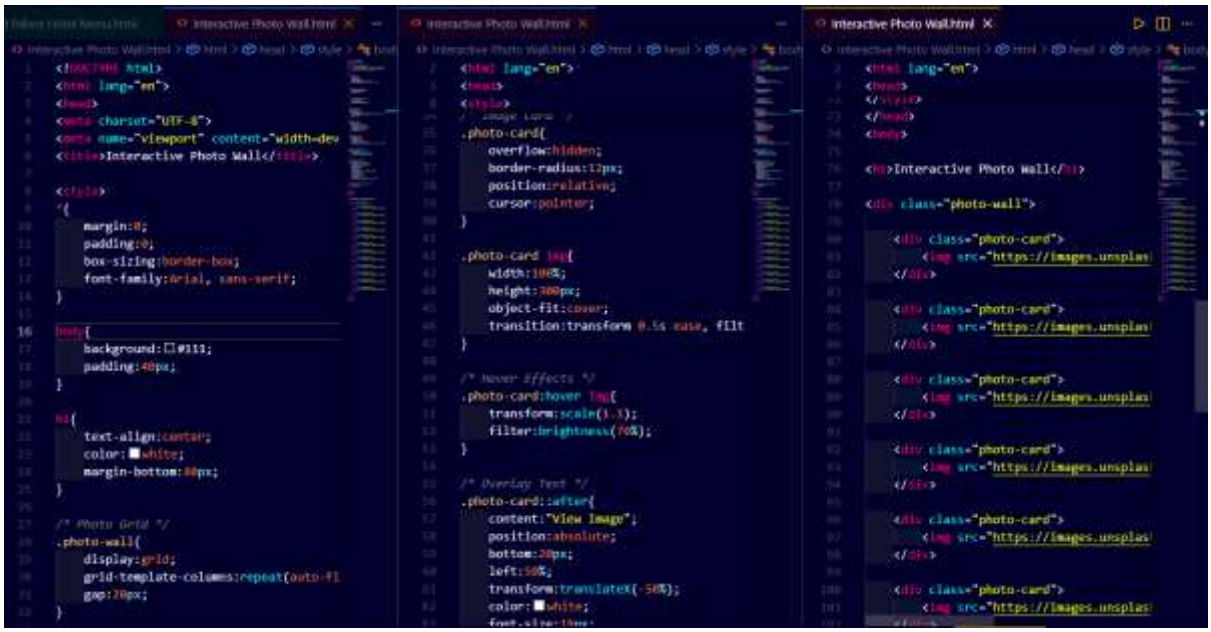
Code:



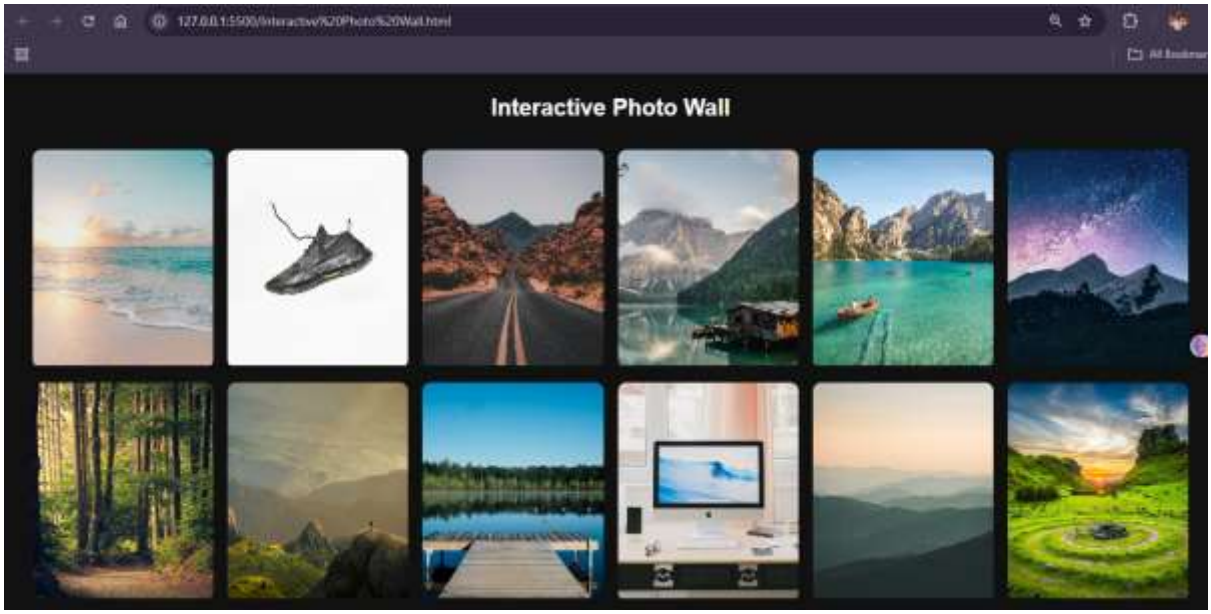
Output:

7. Interactive Photo Wall: Build a gallery of 12 images using grid-template-columns: repeat(auto-fill, minmax(250px, 1fr)) to make the layout automatically responsive without using specific breakpoints.

Code:

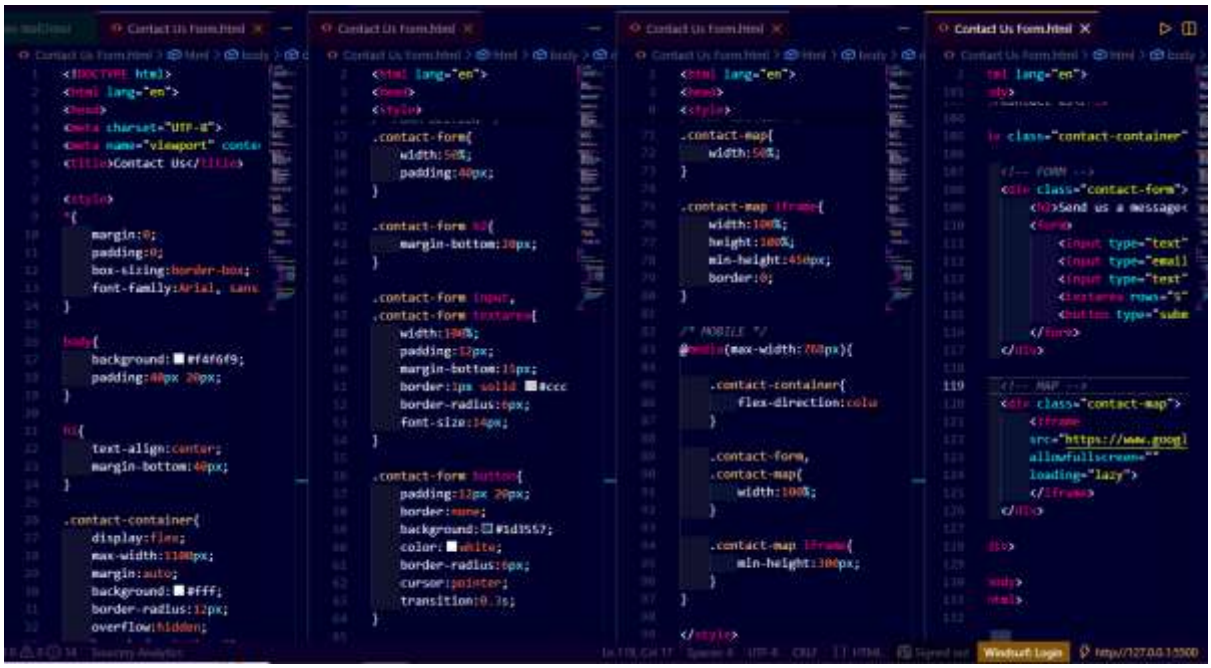


Output:

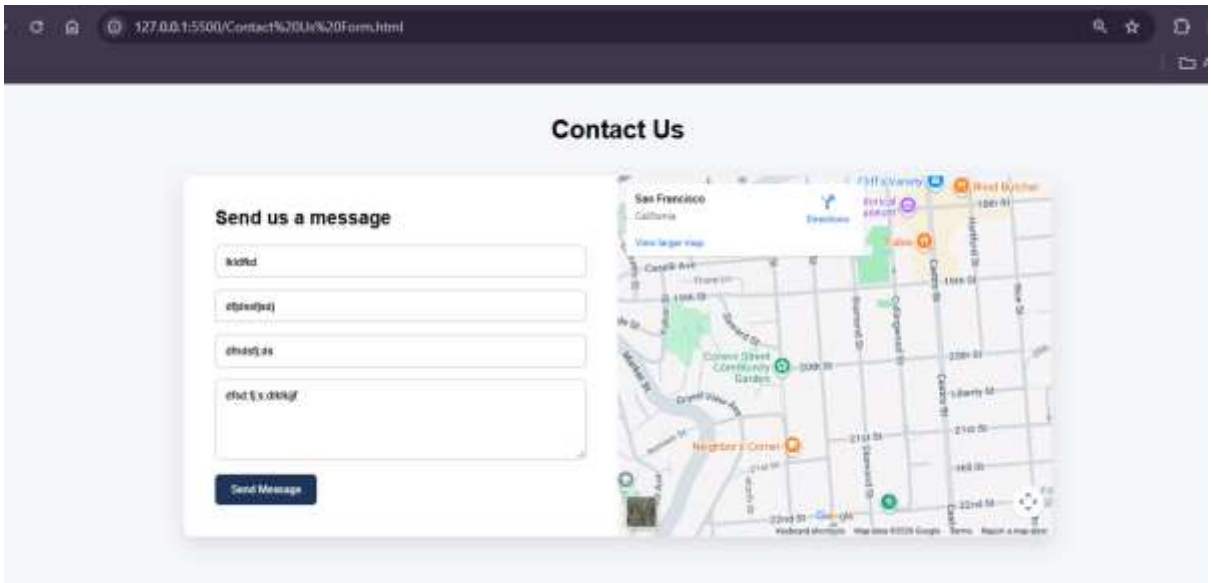


8. Contact Us Page with Map: Develop a layout with a contact form and an embedded map/image where the form width expands to 100% on mobile but stays at 50% on desktop.

Code:

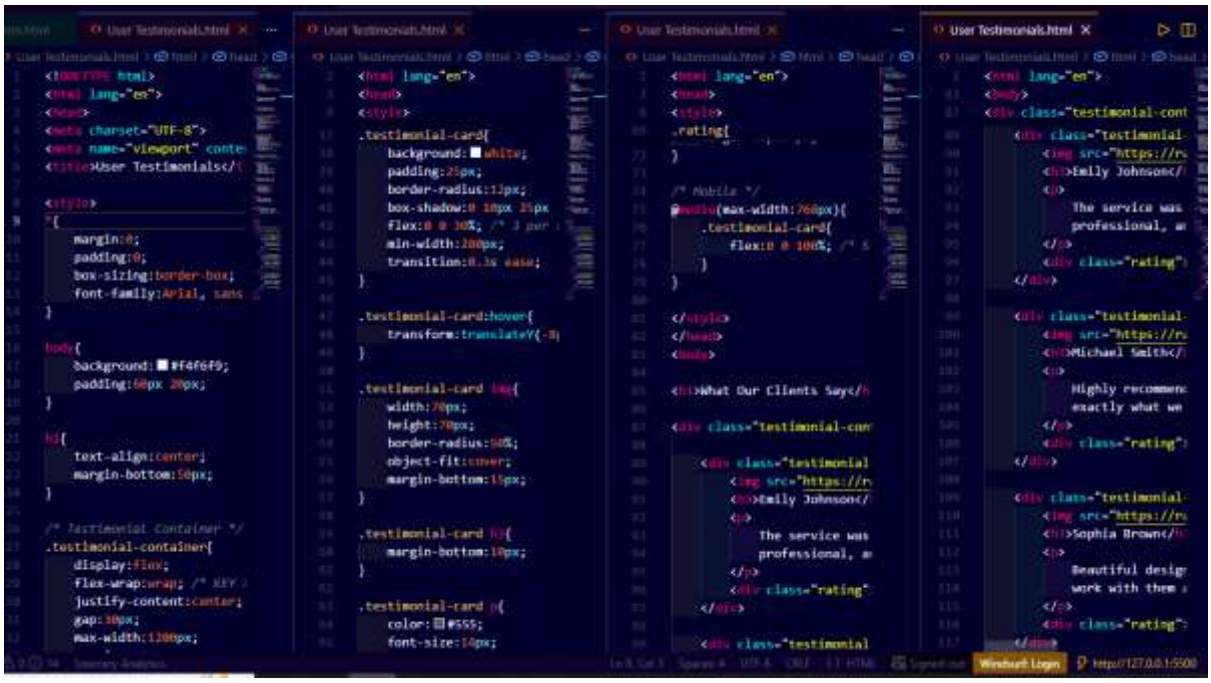


Output:

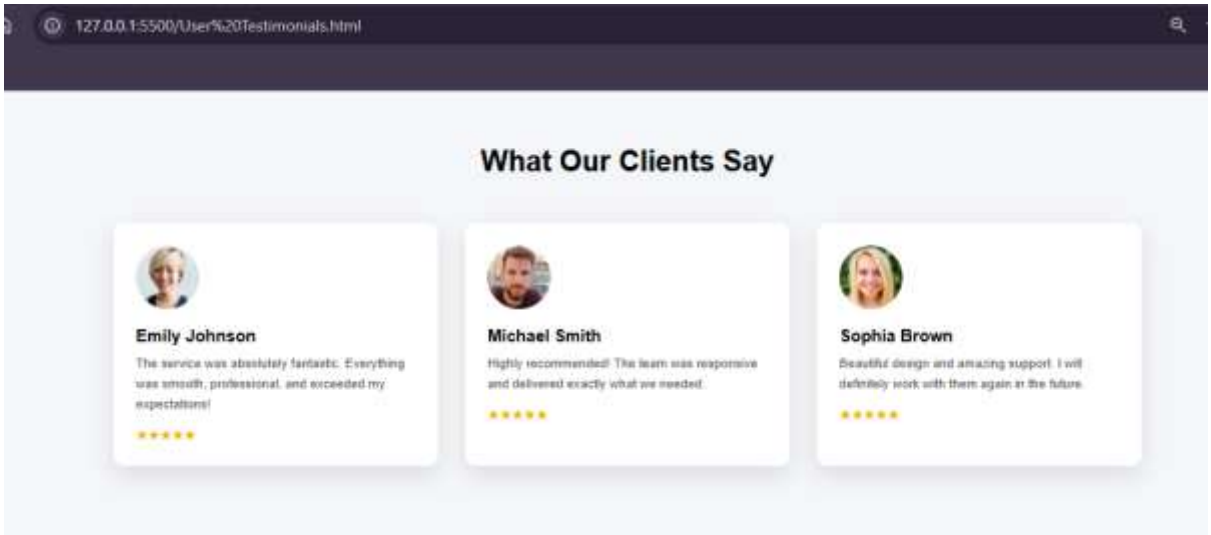


9. User Testimonial Slider: Create a section featuring user reviews that displays three cards per row on desktop and transitions to a single-card view on mobile using the flex-wrap property.

Code:



Output:



10. Global Event Footer: Construct a multi-column footer containing links, social icons, and a newsletter signup that collapses into a single-column centered layout for small screens.

Code:

Output:
