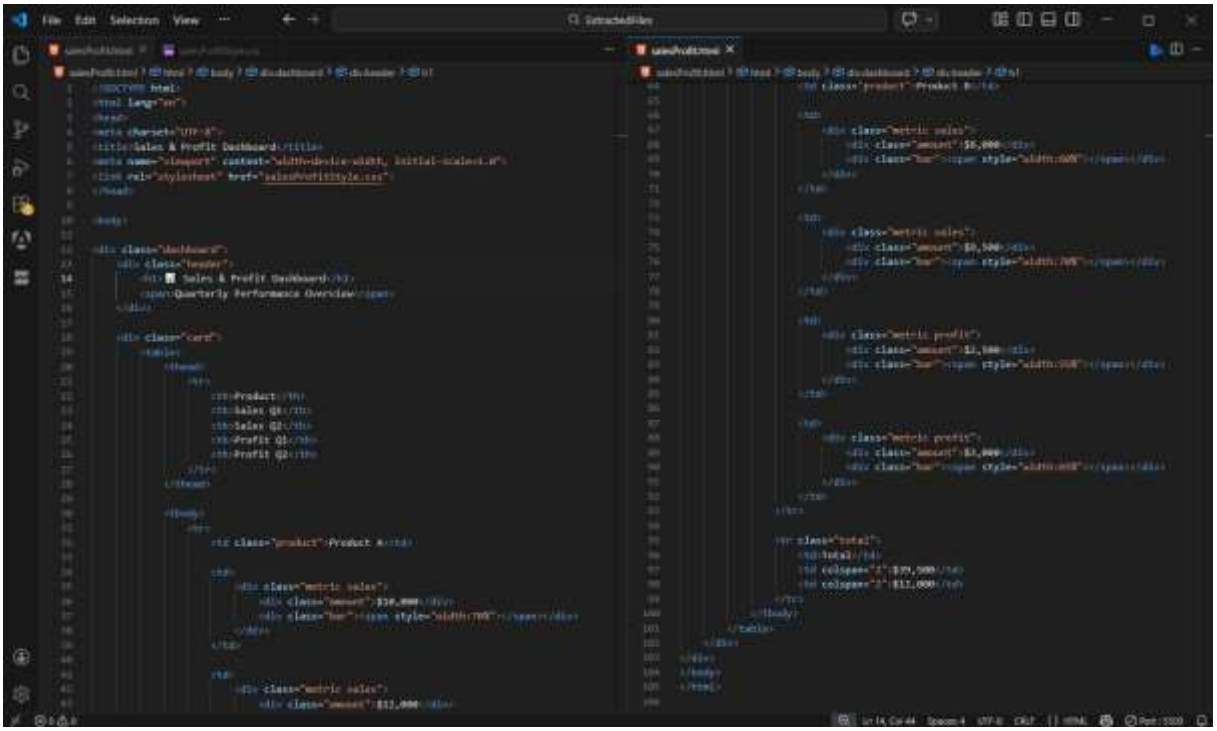
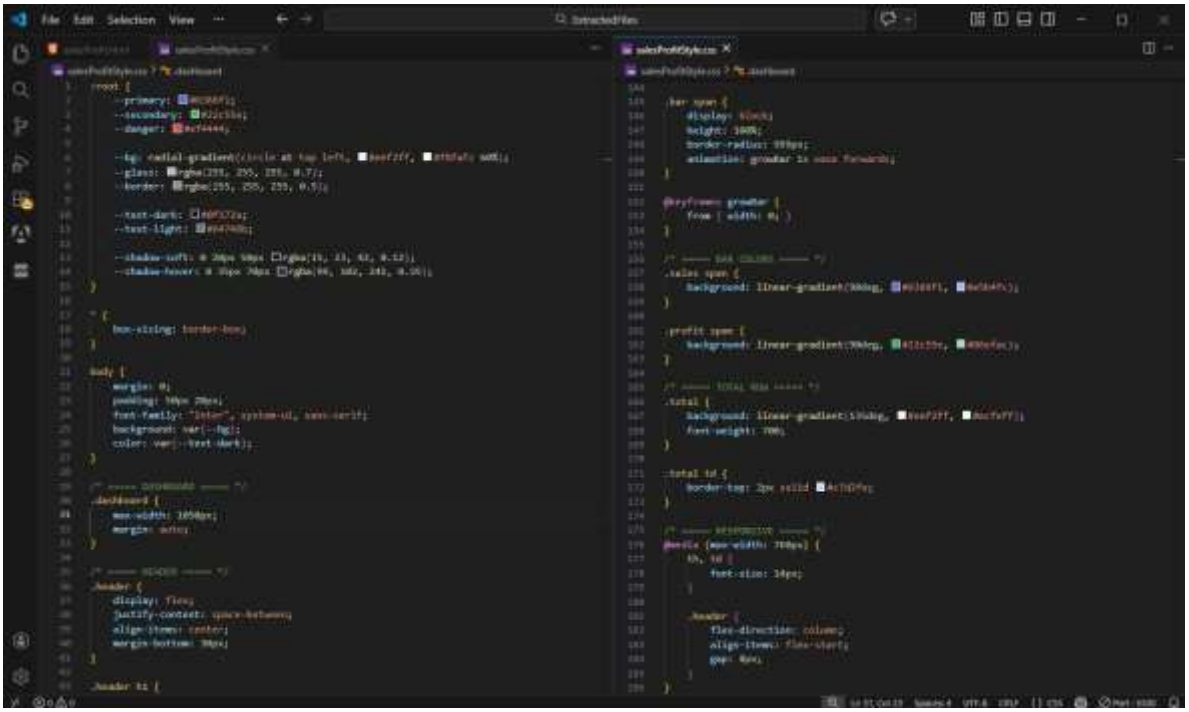
Q3. Create a web page to display Total Sales and Profit using a table with colspan and rowspan attributes. Apply CSS properties such as border-collapse, text-align, and background color for table headers.

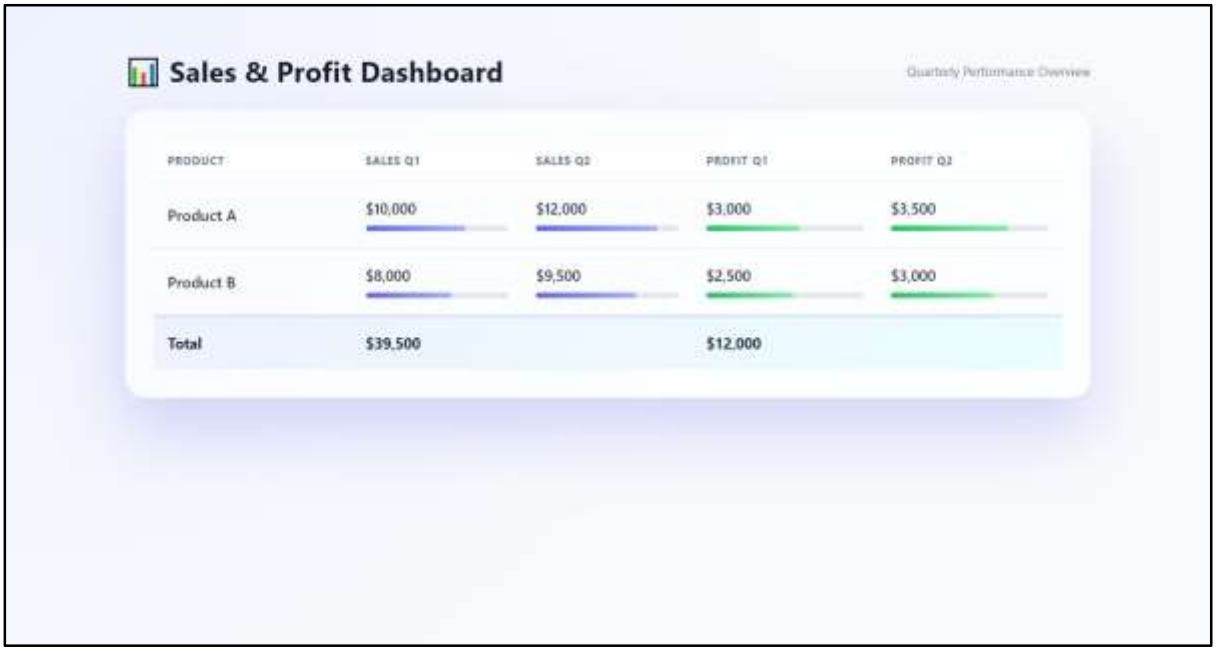
- **HTML :**



- **CSS :**



Output :



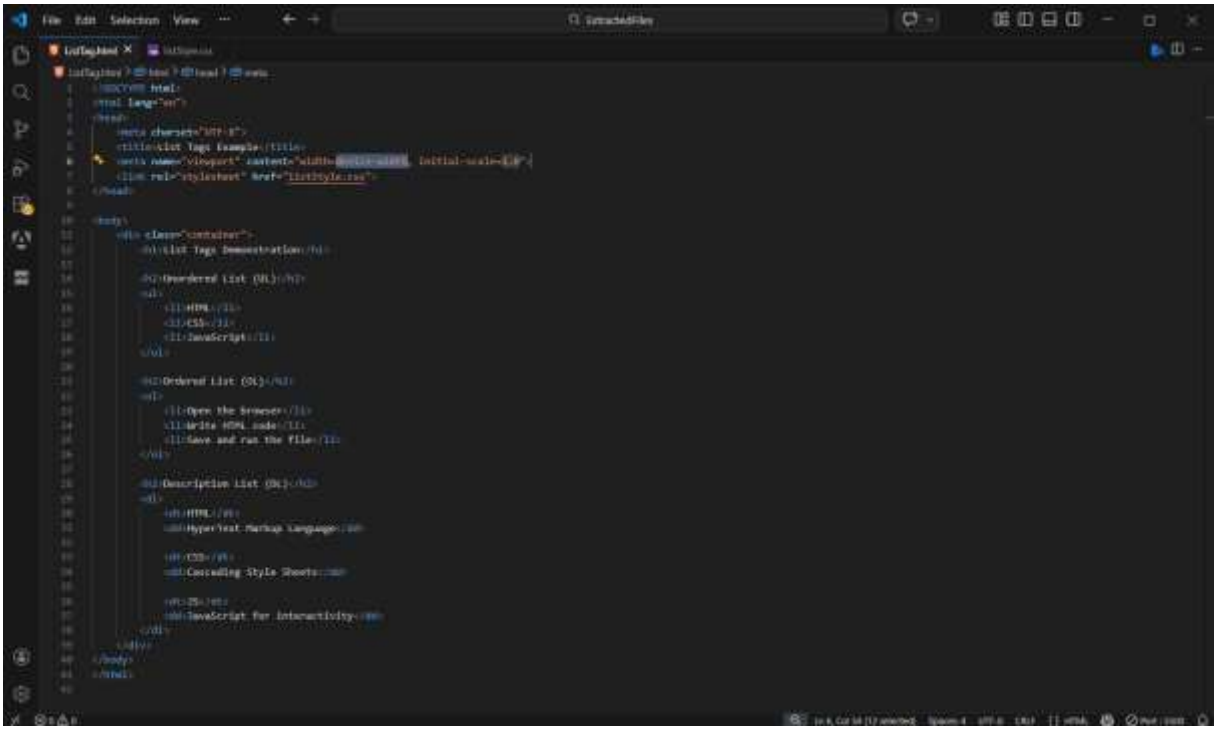
Sales & Profit Dashboard

Quarterly Performance Overview

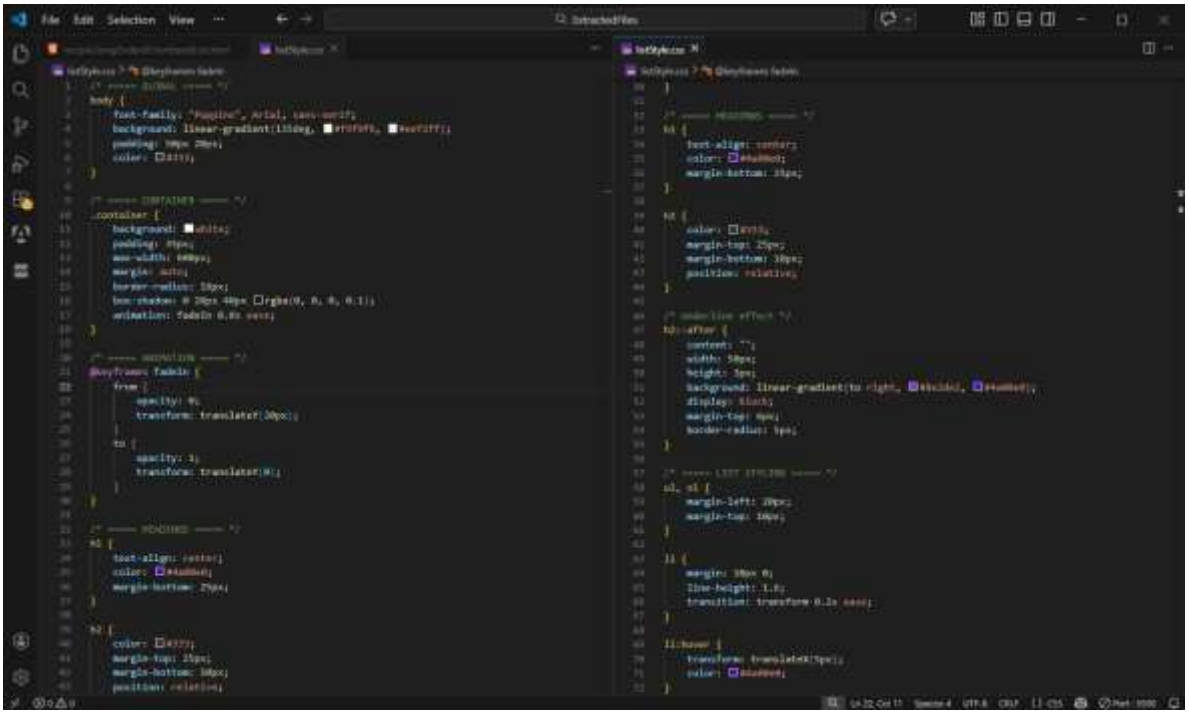
PRODUCT	SALES Q1	SALES Q2	PROFIT Q1	PROFIT Q2
Product A	$10,000	$12,000	$3,000	$3,500
Product B	$8,000	$9,500	$2,500	$3,000
Total	**$39,500**		**$12,000**	

Q4. Create a web page demonstrating list tags (ordered list, unordered list, and description list) with suitable content. Use CSS to apply list-style-position, margin, and font-size.

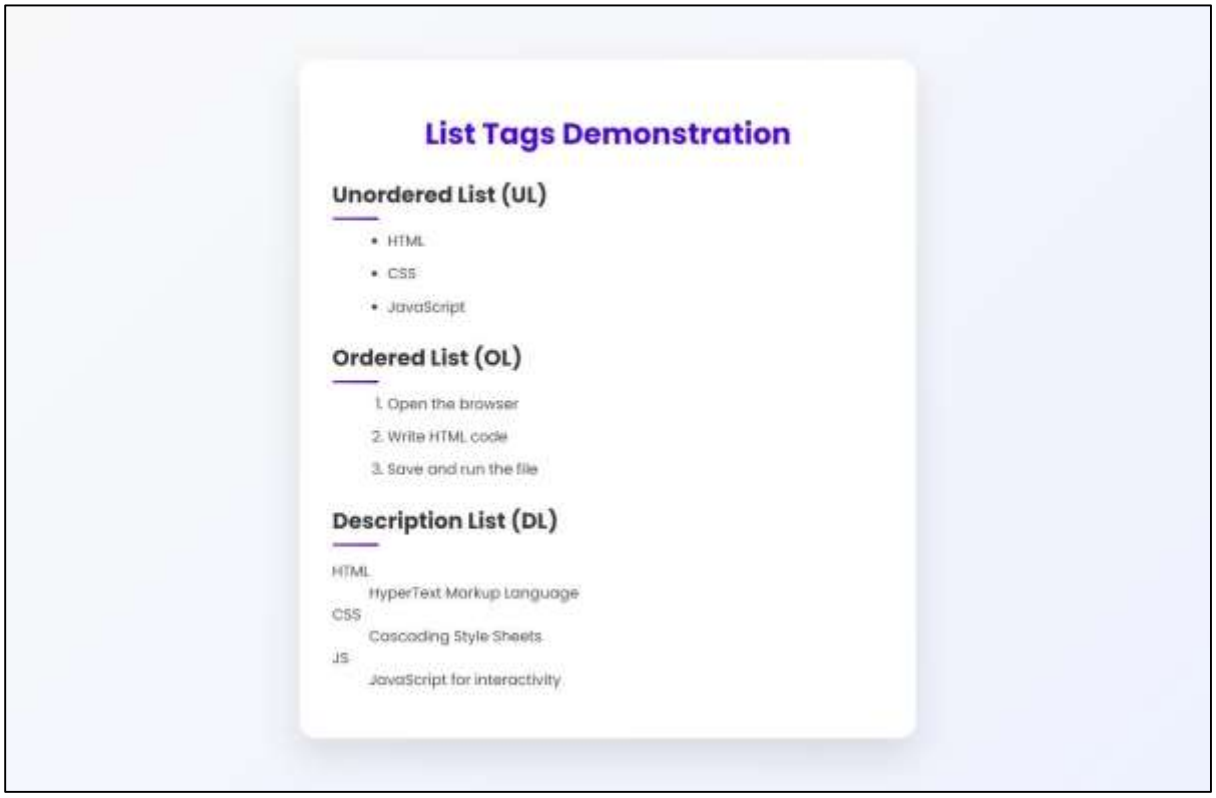
- **HTML :**



- **CSS :**



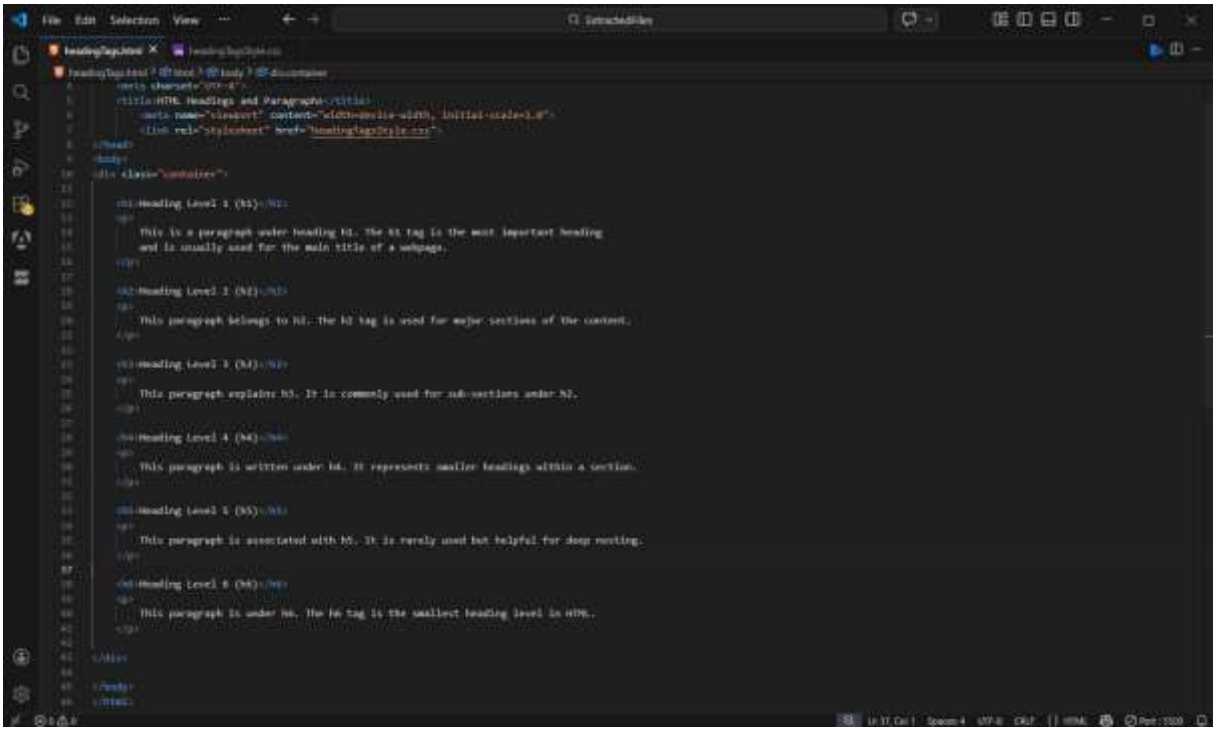
Output :



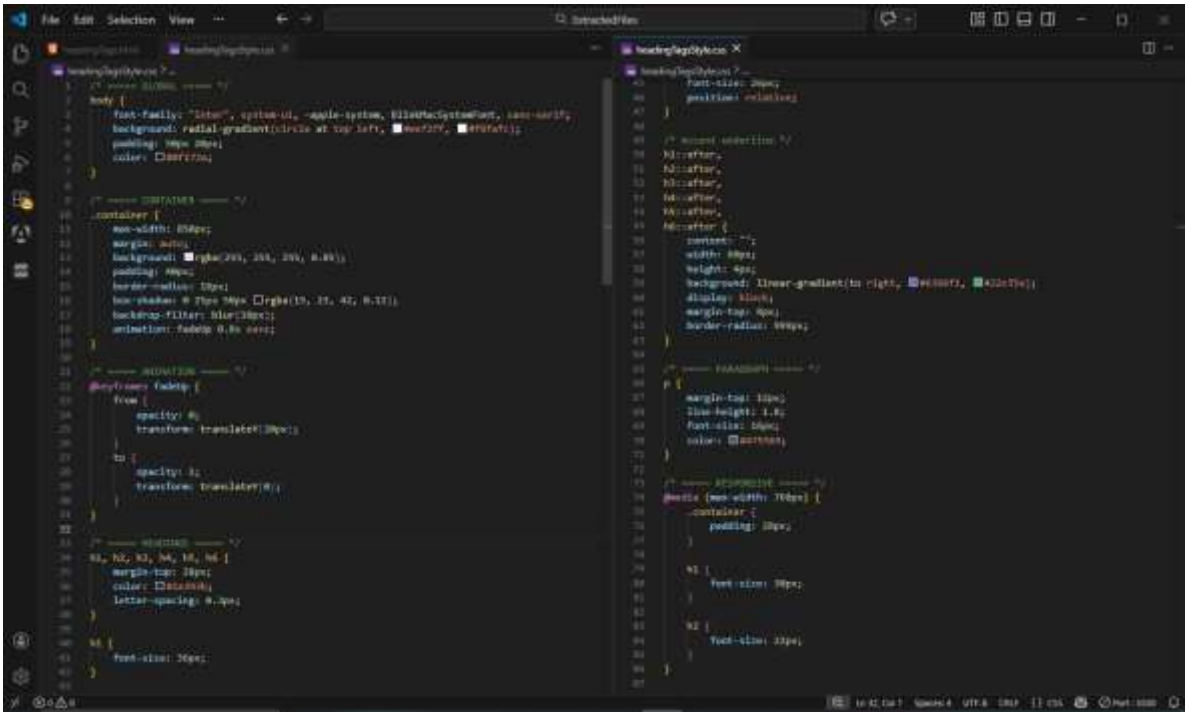
List Tags Demonstration
Unordered List (UL)
HTML
CSS
JavaScript
Ordered List (OL)
1. Open the browser
2. Write HTML code
3. Save and run the file
Description List (DL)
HTML
HyperText Markup Language
CSS
Cascading Style Sheets
JS
JavaScript for interactivity

Q5. Create a web page demonstrating all heading tags from h1 to h6 along with paragraph tags. Apply CSS properties like different colors, font sizes, and text alignment for each heading.

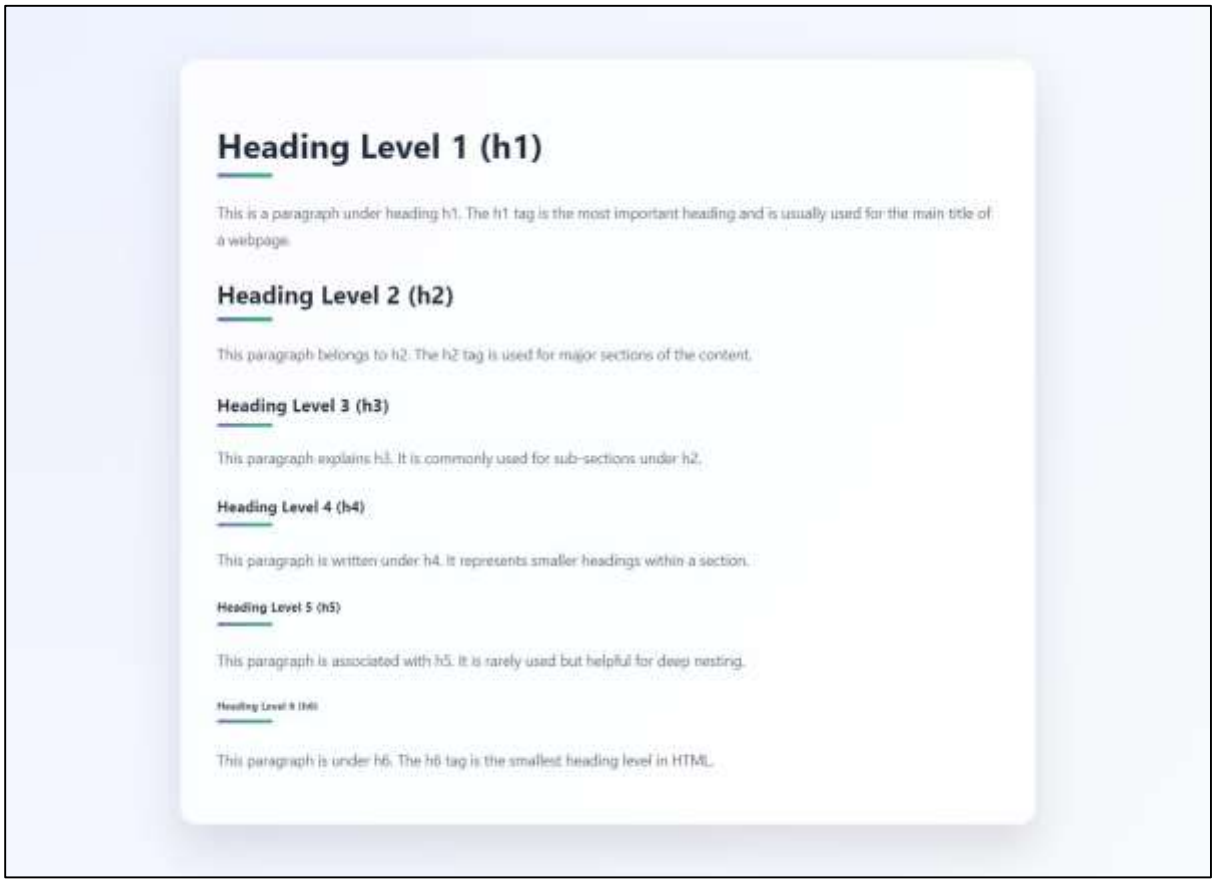
- **HTML :**



- **CSS :**



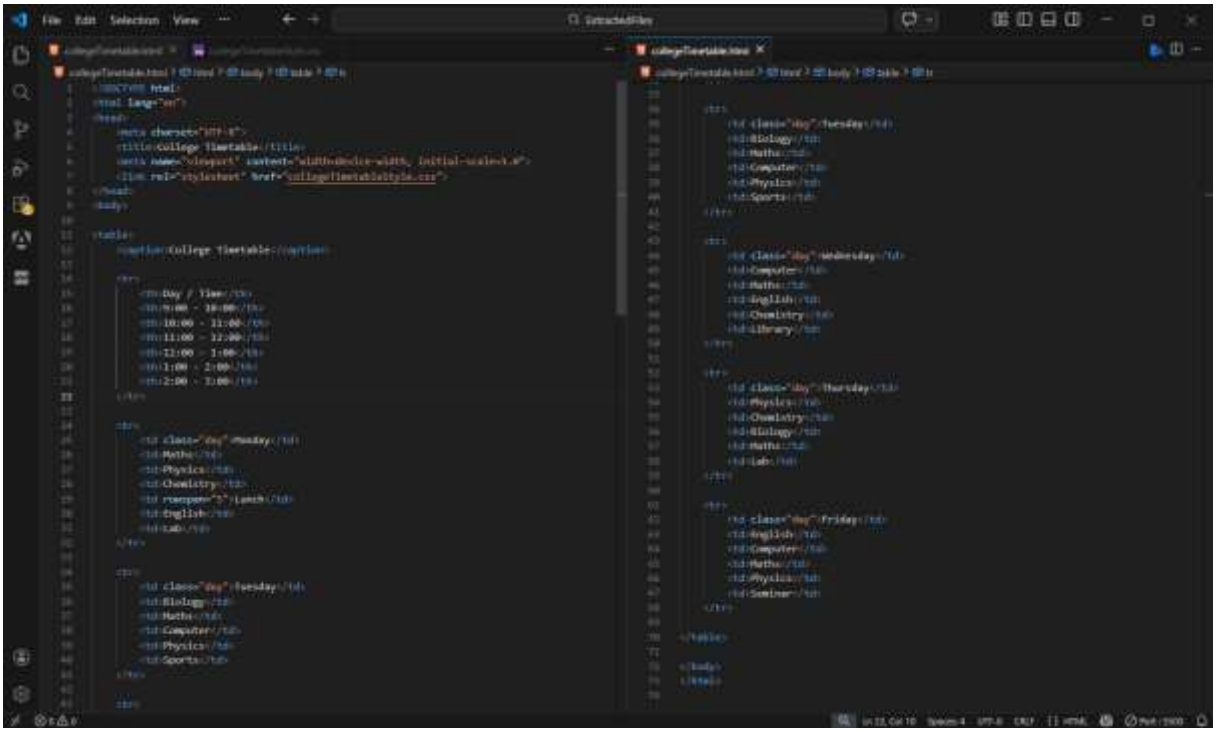
Output :



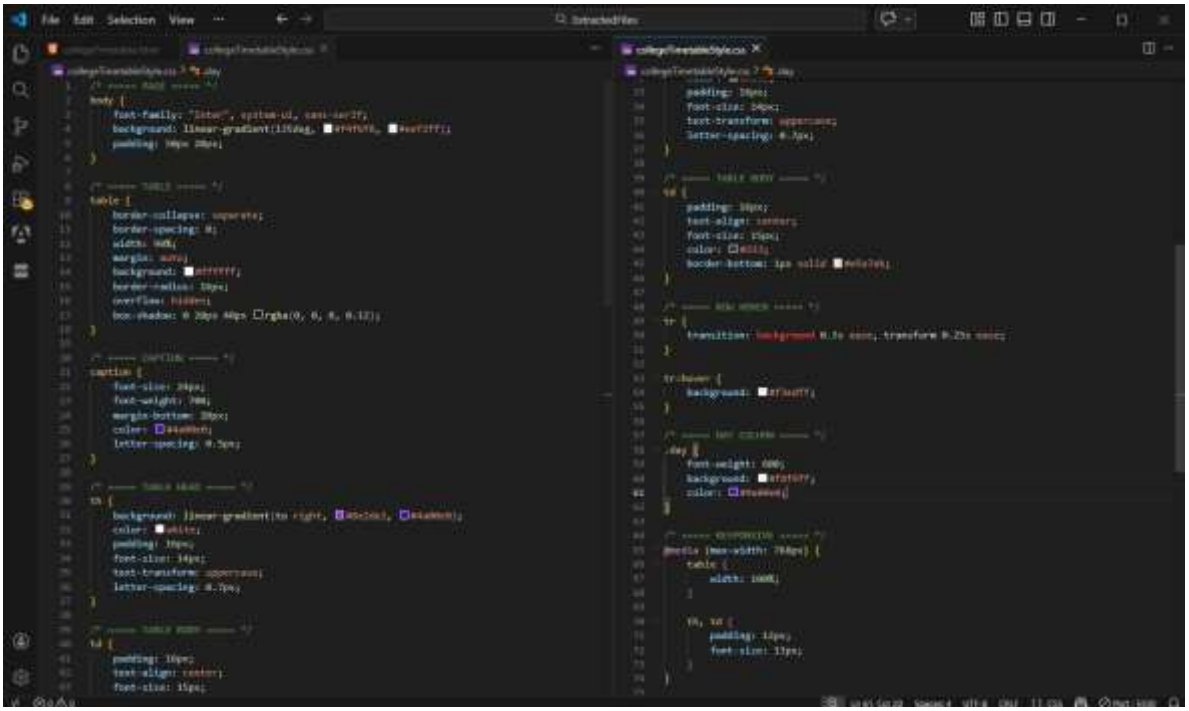
Heading Level 1 (h1)
This is a paragraph under heading h1. The h1 tag is the most important heading and is usually used for the main title of a webpage.
Heading Level 2 (h2)
This paragraph belongs to h2. The h2 tag is used for major sections of the content.
Heading Level 3 (h3)
This paragraph explains h3. It is commonly used for sub-sections under h2.
Heading Level 4 (h4)
This paragraph is written under h4. It represents smaller headings within a section.
Heading Level 5 (h5)
This paragraph is associated with h5. It is rarely used but helpful for deep nesting.
Heading Level 6 (h6)
This paragraph is under h6. The h6 tag is the smallest heading level in HTML.

Q6. Create a web page to display a college timetable using table tags. Use CSS for table borders, spacing, background color, and hover effect on rows.

- **HTML :**



- **CSS :**



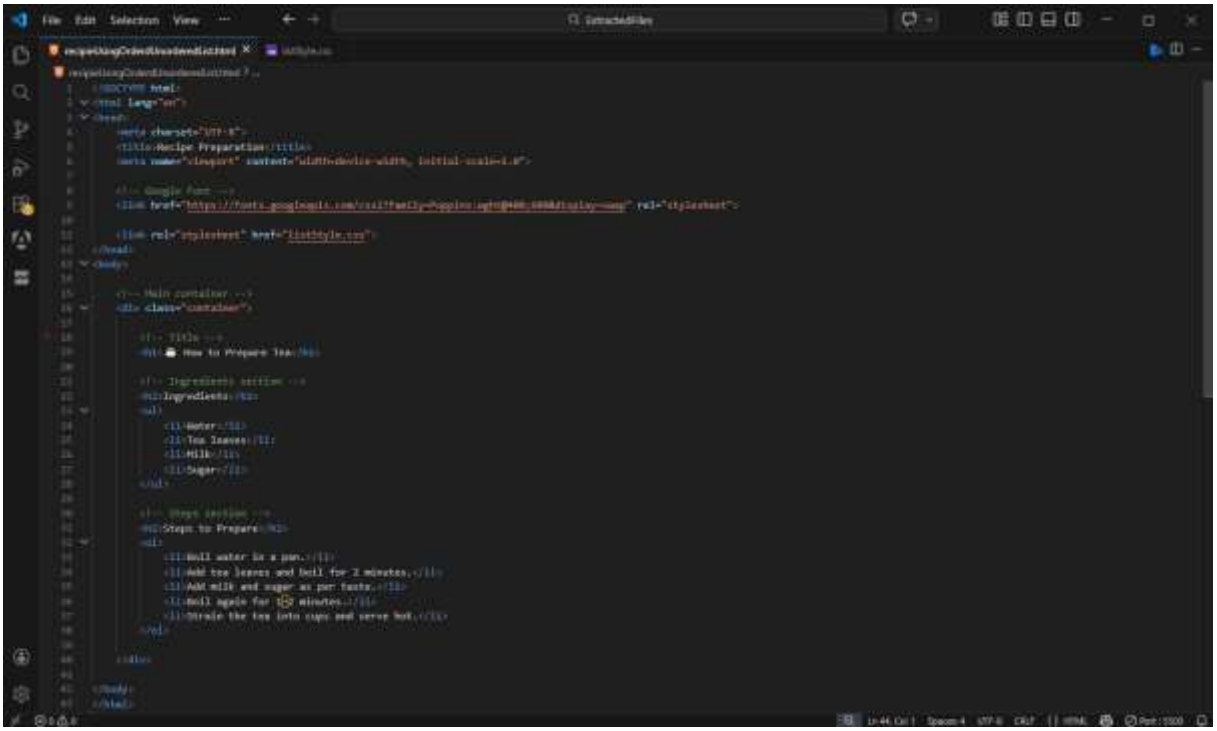
Output :

College Timetable

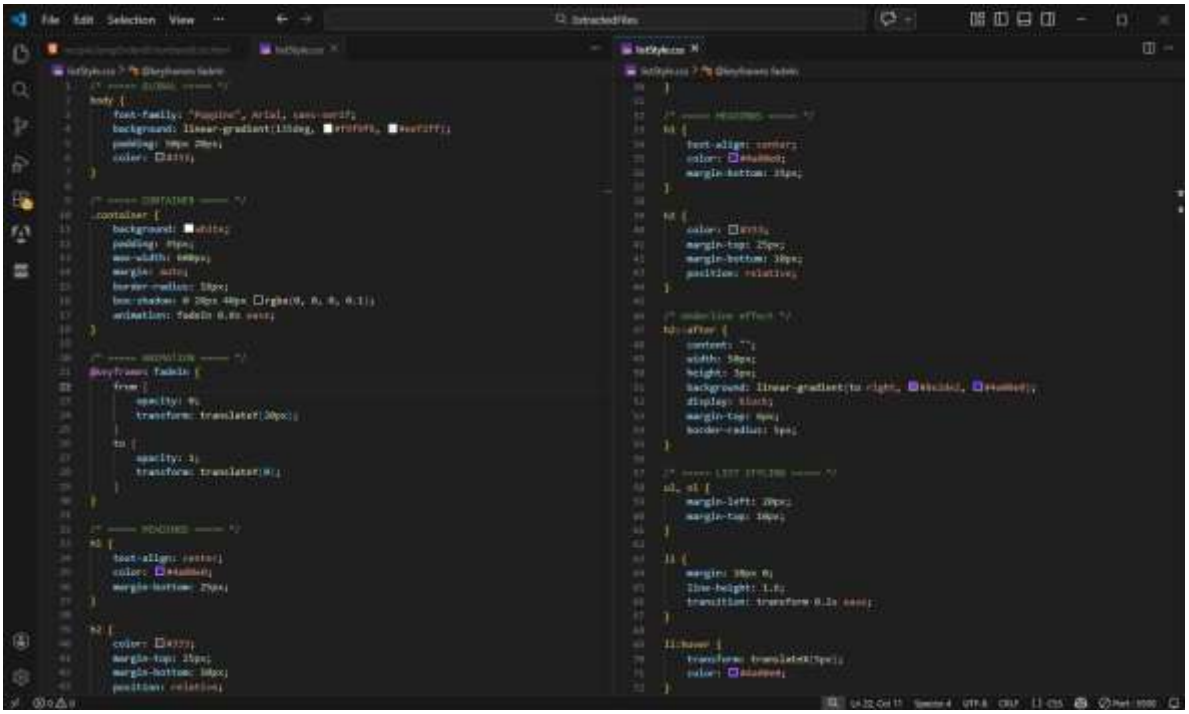
DAY / TIME	9:00 - 10:00	10:00 - 11:00	11:00 - 12:00	12:00 - 1:00	1:00 - 2:00	2:00 - 3:00
Monday	Maths	Physics	Chemistry		English	Lab
Tuesday	Biology	Maths	Computer		Physics	Sports
Wednesday	Computer	Maths	English	Lunch	Chemistry	Library
Thursday	Physics	Chemistry	Biology		Maths	Lab
Friday	English	Computer	Maths		Physics	Seminar

Q7. Create a web page showing steps to prepare a recipe using ordered and unordered lists. Apply CSS properties such as line-height, list-style-type, and background color.

- **HTML :**



- **CSS :**



Output :

How to Prepare Tea

Ingredients

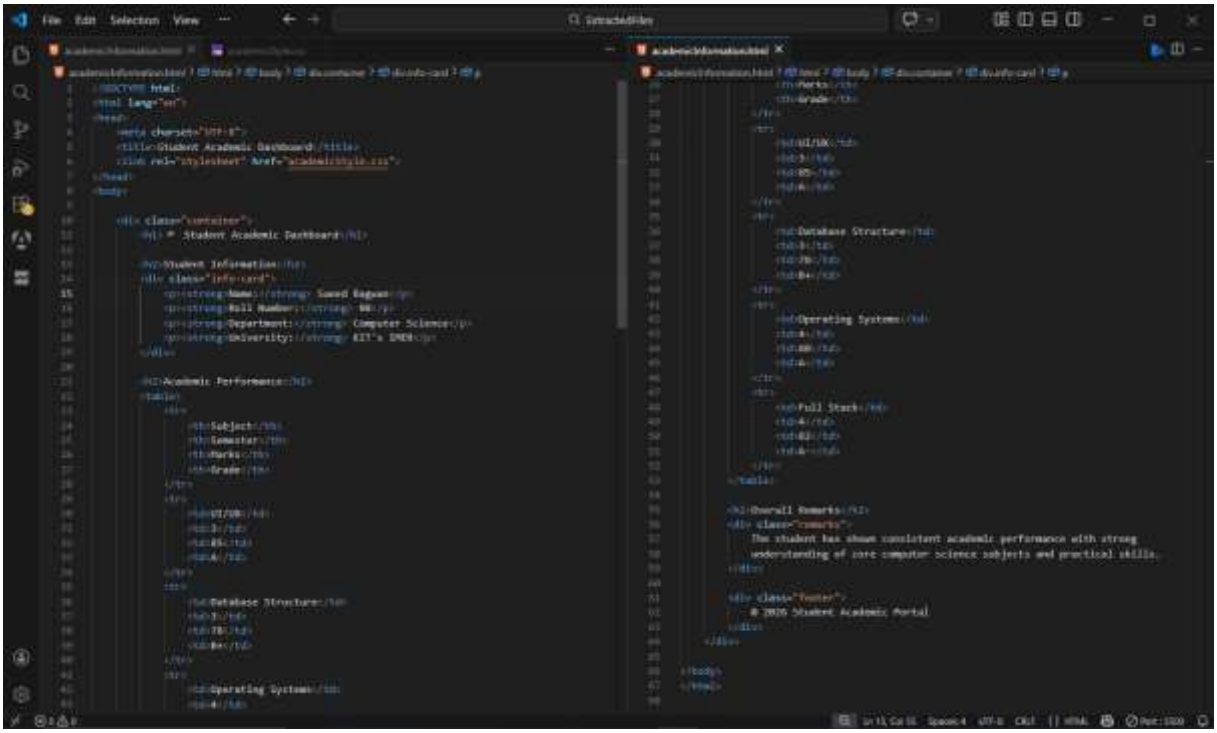
- Water
- Tea leaves
- Milk
- Sugar

Steps to Prepare

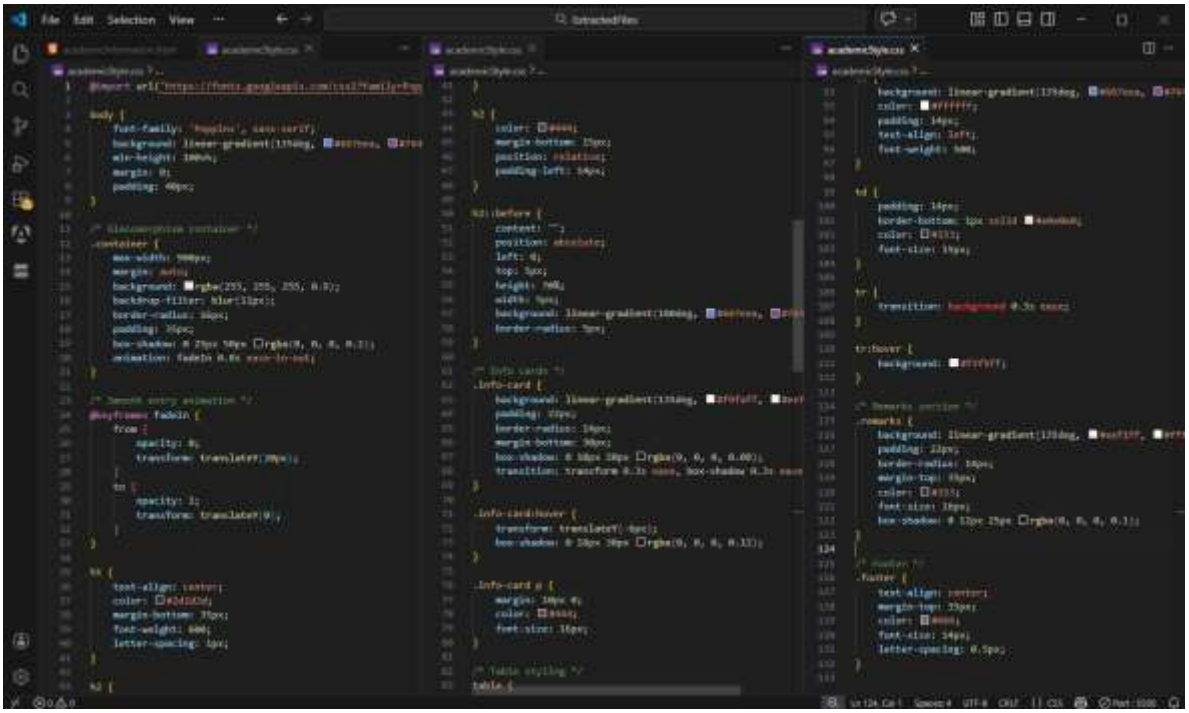
1. Boil water in a pan.
2. Add tea leaves and boil for 2 minutes.
3. Add milk and sugar as per taste.
4. Boil again for 1–2 minutes.
5. Strain the tea into cups and serve hot.

Q8. Create a web page to display student academic details using headings, paragraphs, and table tags. Use CSS for font styling, table borders, padding, and layout alignment.

- **HTML :**



- **CSS :**



Output :

Student Academic Dashboard

Student Information

Name: Saeed Bagwan
Roll Number: 08
Department: Computer Science
University: KIT's IMER

Academic Performance

Subject	Semester	Marks	Grade
UI/UX	3	85	A
Database Structure	3	78	B+
Operating Systems	4	88	A
Full Stack	4	82	A-

Overall Remarks

The student has shown consistent academic performance with strong understanding of core computer science subjects and practical skills.
